Adeyanju Fuhad

Full Stack Developer · Founder of Sova & Edify

Lagos, Nigeria | +234 704 929 4736 | adeyanjufuhad@gmail.com
Portfolio: adeyanjufuhad.vercel.app | GitHub: github.com/adeyanjufuhad | LinkedIn: linkedin.com/in/adeyanju-fuhad-206802320

Open to full-time roles: remote (worldwide) or on-site / hybrid in Lagos · freelance & contract

SUMMARY

Full stack developer who ships web and mobile products end to end, from database design to the last UI state. Founder of two live products, Sova and Edify, and one of 30 developers shortlisted to compete in Devcenter Hacktober 2026. Works across React, Next.js, Node.js, Python (FastAPI), Flutter and PostgreSQL, and backs production work with automated tests and CI/CD.

SKILLS

Languages	TypeScript, JavaScript, Python, Dart, SQL, HTML / CSS
Frontend & Mobile	React, Next.js, Tailwind CSS, Flutter, React Native (Expo), Framer Motion, Accessibility (WCAG)
Backend & APIs	Node.js, Express, FastAPI, REST APIs, WebSockets (Socket.io), JWT Auth, Payments (Razorpay, Paystack)
Data & Cloud	PostgreSQL (Neon, Supabase), MongoDB, Vercel, Cloudflare Workers, Render, GitHub Actions CI/CD, Git
AI Integration	Google Gemini API, Groq (Llama), Hugging Face Inference, Rules-based AI guardrails

EXPERIENCE

Founder & Lead Engineer, Sova — **2026 – Present**
Savings-circle records for ajo, esusu and adashe groups · Nigeria — sova.rumptycloud.app

- Built and launched a Flutter app (web, Android) and Node.js API that keeps a tamper-evident record of savings circles.
- Enforced business rules in PostgreSQL 17 functions and triggers; every change lands in a verifiable SHA-256 hash chain.
- Automated Android releases and 6-hourly public ledger checkpoints with GitHub Actions.

Founder & Engineer, Edify — **2026 – Present**
Exam-prep platform for SS1–SS3 students · Nigeria — edify-sigma-plum.vercel.app

- Launched a paid study platform (plans from NGN 1,000) with 1,044+ practice questions, 44 lessons and timed CBT tests.
- Built on Next.js and Neon Postgres with a typed curriculum registry, so new lessons ship without route or API changes.

Frontend Developer Intern, Arrowstack · *Remote* — **2026**

- Delivered Kuza, a Next.js and TypeScript storefront with accessible keyboard navigation, persistent cart and checkout.
- Built Trackr, a logistics dashboard with Recharts analytics, sortable and filterable tables, and an alerts centre.

Full Stack Developer Intern, Oasis · *Remote* — **2026**

- Shipped Blaze, a MERN pizza-ordering platform with real-time order tracking over Socket.io and Razorpay payments.
- Implemented JWT auth with email verification, Cloudinary uploads, and an admin dashboard with low-stock email alerts.

PROJECTS

CheckAm — Scam Checker for Nigerian Messages & Links — Live · Code
JavaScript · PWA · Tesseract.js · Serverless Functions · Groq

- Free app that flags scam messages, screenshots and links in English or Pidgin; an on-device rules engine keeps data private.
- AI can only raise a warning, never mark a message safe; 108 automated tests cover 44 real-world scam types.

FastTrack — Loan Onboarding & Pre-qualification — Live · Code
Flutter · Neon Postgres · Node.js / TypeScript · Gemini · GitHub Actions

- Five-minute flow returns a pre-qualified loan amount in ~3s; Gemini extracts the figures, a deterministic rules engine decides.
- Ed25519 JWT verification, presigned private storage, 97 automated tests, and CI/CD shipping web, Android and backend.

RepoSpec — Grounded Repo Context for AI Coding Assistants — Live · Code
Next.js · TypeScript · Static parsing · GitHub App

- Extracts models, routes, types and rules from any GitHub commit via static parsing into a token-budgeted context file.

Big Apple Beauty — Client Storefront with WhatsApp Checkout — Live · Code
Next.js · Neon Postgres · Cloudflare Workers

- Storefront and admin for a Lagos wholesaler on the client's own domain, with WhatsApp checkout and server-side pricing.

ACHIEVEMENTS

Shortlisted Developer — Devcenter Hacktober 2026 — One of 30 developers selected to compete; built Sova — **2026**
Best Graduating Student — Nupat Technologies Fullstack Software Training Programme — **2024**
Builder, GDG OAU Build with AI — Google Developer Groups, Obafemi Awolowo University — **2026**

EDUCATION

B.Sc. Computer Engineering, Obafemi Awolowo University (OAU), Ile-Ife — **Expected 2030**
Fullstack Software Engineering Programme — Nupat Technologies — Graduated as Best Graduating Student — **2024**
