Adeyanju Fuhad

Full Stack Developer & Founder — React · Next.js · Node.js · TypeScript · Python · Flutter

Lagos, Nigeria · github.com/adeyanjufuhad · linkedin.com/in/adeyanju-fuhad-206802320 · adeyanjufuhad@gmail.com · 07049294736

PROFESSIONAL SUMMARY

Full stack developer and founder who builds web and mobile products end to end, from Postgres triggers to the last button state. Founder of Sova, a tamper-evident record keeper for ajo and esusu savings circles that earned a place among 30 developers shortlisted to compete in Devcenter Hacktober 2026, and Edify, a study platform for Nigerian senior secondary students with 1,044+ practice questions. Shipped Blaze, Kuza and Trackr during internships at Oasis and Arrowstack, and built CheckAm and FastTrack, AI-assisted products where a rules engine, not the model, makes the final call. Best Graduating Student at Nupat Technologies; B.Sc. Computer Engineering in progress at Obafemi Awolowo University.

TECHNICAL SKILLS

Frontend	React, Next.js, JavaScript / TypeScript, HTML5 / CSS3, Tailwind CSS, shadcn/ui, React Native / Expo, Flutter / Dart
Backend	Python / FastAPI, Node.js / Express, REST APIs, PostgreSQL, Neon (Postgres, Auth, Storage, Functions), Supabase, MongoDB
Tools	Git / GitHub, GitHub Actions CI/CD, Google Gemini API, Vercel, Render, EAS Build, Socket.io, Paystack, OPay, Razorpay, Cloudinary, node-cron
Concepts	JWT Authentication, Real-time Systems, Admin Dashboards, Responsive Design, WCAG Accessibility

EXPERIENCE

Sova — Founder & Lead Engineer

Nigeria · 2026 – Present · Ajo & esusu savings circles, on record

- Built a Flutter app (web and Android) and a Node.js API on PostgreSQL 17, where joining, draws, payments, disputes and the ledger all run as database functions and triggers.
- Designed a commit-reveal payout draw and a per-circle SHA-256 hash chain; a GitHub Actions job publishes chain checkpoints every 6 hours and a public page re-verifies any circle in the browser.
- Shortlisted as one of 30 developers selected to compete in Devcenter Hacktober 2026 with Sova.

Edify — Founder & Engineer

Nigeria · 2026 – Present · Weekly lessons & exam practice for SS1–SS3

- Built and launched a Next.js and Neon Postgres study platform with weekly notes, self-marking practice and timed CBT tests: 1,044+ practice questions and 44 lessons live, with plans from NGN 1,000.
- Designed a typed curriculum registry so adding a lesson updates the dashboard, lesson pages, "up next" links and the progress API with no route changes.

Arrowstack — Frontend Developer Intern

Remote · 2026 · Product Internship

- Delivered Kuza, a Next.js e-commerce storefront with accessible keyboard navigation and persistent cart logic.
- Built Trackr, a logistics dashboard with Recharts analytics, sort/filter/pagination and an alerts centre.

Oasis — Fullstack Developer Intern

Remote · 2026 · Product Internship

- Shipped Blaze, a full-stack pizza ordering platform with real-time order tracking via Socket.io and Razorpay payments.
- Implemented JWT auth with email verification and password reset, Cloudinary image uploads and an admin inventory dashboard.

PROJECTS

CheckAm — Scam Checker for Nigerian Messages & Links

■ Live

JavaScript · PWA · Tesseract.js · Cloudflare Pages / Vercel Functions · Groq · Workers AI | 2026

- Installable, framework-free web app that checks pasted messages, screenshots and links for Nigerian scam patterns and explains every finding in English or Nigerian Pidgin.
- On-device rules engine (31 scam-script rules, 59 official organisations for lookalike-domain detection) keeps messages private; only links go to a serverless checker.
- Optional AI check guarded so it can only raise a warning, never say "safe"; 108 tests including a corpus of 44 real-world scam types.

FastTrack — Digital Onboarding & Loan Pre-qualification

■ Live

Flutter · Dart · Neon (Postgres, Auth, Storage, Functions) · Node.js / TypeScript · Gemini · GitHub Actions | 2026

- Five-minute applicant flow that returns a pre-qualified amount and tier, plus an officer dashboard with approve / more-info / decline actions.
- Gemini extracts income and spending from documents while a deterministic rules engine sets the amount, with results in about 3 seconds.
- Server-side access rules, Ed25519 JWT verification and private storage behind 10-minute presigned links; 97 tests and full CI/CD.

RepoSpec — Grounded Repo Context for AI Coding Assistants

■ Live

Next.js · TypeScript · Static parsing · GitHub App · Vitest | 2026

- Extracts database models, API routes, exported types and architecture rules from any GitHub commit with static parsing, no AI model.
- Token-weighted treemap, per-file toggles and a 100–20,000 token budget; exports .ai-context.md, .cursorrules or CLAUDE.md.

Big Apple Beauty — Wholesale Storefront with WhatsApp Checkout

■ Live

Next.js · Tailwind CSS · Neon Postgres · Cloudflare Workers | Client project, 2026

- Storefront and owner admin for a Lagos beauty wholesaler; checkout sends the cart to WhatsApp and logs a pending order.
- Server-side price lookups, a restricted database role and privacy-friendly analytics, served from Cloudflare Workers on the client's domain.

Blaze — Pizza Ordering & Delivery Platform

■ Live

React · Node.js · Express · MongoDB · Socket.io · Razorpay | Oasis Internship

- Full-stack food ordering platform with a 4-step custom pizza builder and real-time order status tracking via Socket.io.
- Admin dashboard with inventory management and automated low-stock email alerts via node-cron.

Kuza — Streetwear E-Commerce Storefront

■ Live

Next.js 14 · TypeScript · Tailwind CSS · shadcn/ui | Arrowstack Internship

- Accessible storefront with product filters, sort, persistent cart and full checkout flow, plus loading, error and empty states.

AgroFinis — Agritech Platform

■ Live

React · Supabase · FastAPI | 2026 – Present

- Real-time weather data, AI crop advisory and commodity market listings for Nigerian farmers; listed on Orynth under ticker AGRF.

ACHIEVEMENTS

- Shortlisted Developer — Devcenter Hacktober 2026 — One of 30 developers selected to compete; built Sova (2026).
- Founder of Sova and Edify — Two products designed, built and launched end to end (2026).
- Best Graduating Student — Nupat Technologies Fullstack Training Programme (2024).
- Builder, GDG OAU Build with AI — Google Developer Groups, Obafemi Awolowo University (2026).

EDUCATION

Obafemi Awolowo University (OAU), Ile-Ife

B.Sc. Computer Engineering · In Progress

CERTIFICATIONS

Fullstack Developer Training — Nupat Technologies, 2024 (Best Graduating Student)
