Open to full-time roles: remote (worldwide) or on-site / hybrid in Lagos · freelance & contract

Professional Summary

Full stack developer who ships web and mobile products end to end, from database design to the last UI state. Founder of Sova and Edify, and a 2× hackathon winner: 1st place at OPEN//BUILD 2026 with Ṣòwò and 2nd place at Devcenter Hacktober 2026 with Sova. Works across React, Next.js, Node.js, Python (FastAPI), Go, Flutter and PostgreSQL, and backs production work with automated tests and CI/CD.

Technical Skills

- **Languages:** TypeScript, JavaScript, Python, Go, Dart, SQL, HTML / CSS
- **Frontend & Mobile:** React, Next.js, Tailwind CSS, Flutter, React Native (Expo), Framer Motion, Accessibility (WCAG)
- **Backend & APIs:** Node.js, Express, FastAPI, REST APIs, WebSockets (Socket.io), JWT Auth, Payments (Razorpay, Paystack)
- **Data & Cloud:** PostgreSQL (Neon, Supabase), MongoDB, Vercel, Cloudflare Workers, Render, GitHub Actions CI/CD, Git
- **AI Integration:** LLM tool calling (Qwen3), Gemini API, Groq, Hugging Face, Claude Code agents, Rules-based AI guardrails

Professional Experience

Founder & Lead Engineer 2026 – Present
Sova — Savings-circle records for ajo, esusu and adashe groups · 2nd place, Devcenter Hacktober 2026 *Nigeria*
- Built and launched a Flutter app (web, Android) and Node.js API that keeps a tamper-evident record of savings circles.
- Enforced rules in PostgreSQL 17 triggers and a SHA-256 hash chain; CI ships Android releases and ledger checkpoints.

Founder & Engineer 2026 – Present
Edify — Exam-prep platform for SS1–SS3 students *Nigeria*
- Launched a paid study platform (plans from ₦1,000) with 1,044+ practice questions, 44 lessons and timed CBT tests.
- Built on Next.js and Neon Postgres with a typed curriculum registry, so new lessons ship without route or API changes.

Frontend Developer Intern 2026
Arrowstack — Product internship *Remote*
- Delivered Kuza, a Next.js and TypeScript storefront with accessible keyboard navigation, persistent cart and checkout.
- Built Trackr, a logistics dashboard with Recharts analytics, sortable and filterable tables, and an alerts centre.

Full Stack Developer Intern 2026
Oasis — Product internship *Remote*
- Shipped Blaze, a MERN pizza-ordering platform with real-time order tracking over Socket.io and Razorpay payments.
- Implemented JWT auth with email verification, Cloudinary uploads, and an admin dashboard with low-stock email alerts.

Featured Projects

Sova: Savings-Circle Records for Ajo & Esusu (2nd Place, Devcenter Hacktober 2026) *Live | Code*
Flutter · Dart · Node.js · PostgreSQL 17 · Next.js · GitHub Actions
- Commit-reveal payout draw anyone can recompute; members log payments with a bank reference and the circle votes on disputes.
- Database triggers write every change to a per-circle SHA-256 hash chain, and a public verify page rechecks it in the browser.

Ṣòwò: AI Sales Assistant for WhatsApp Vendors (1st Place, OPEN//BUILD 2026) *Live | Code*
Next.js 16 · TypeScript · FastAPI · PostgreSQL · Qwen3 · WhatsApp Cloud API · Paystack
- Frontend lead: built the web app and API contract. Qwen3 only picks tools; the server sets every price, so the floor never leaks.

Edify: Weekly Lessons & Exam Practice for SS1–SS3 *Live | Code*
Next.js · TypeScript · Neon Postgres · Tailwind CSS
- Weekly notes, self-marking practice, 434 likely exam questions and timed CBT tests, with progress saved per learner.

FastTrack: Loan Onboarding & Pre-qualification *Live | Code*
Flutter · Neon Postgres · Node.js / TypeScript · Gemini · GitHub Actions
- Five-minute flow returns a pre-qualified loan amount in ~3s; Gemini extracts the figures, a deterministic rules engine decides.
- Ed25519 JWT verification, presigned private storage, 97 automated tests, and CI/CD shipping web, Android and backend.

Canary: AI Agents That Break Your Business Rules on Every PR (Flip the Switch 2026) *Live | Code*
Next.js 16 · TypeScript · Hono · PostgreSQL · Claude Code · Switch · GitHub CLI
- A red agent maps each PR diff to the team's plain-English rules, writes an exploit and runs it in a sandbox on a fresh database.
- A blue agent pushes a fix and a regression test, then red re-runs the exploit; verified end to end on a real race-condition bug.

Awards & Recognition

1st Place — OSCA Ile-Ife OPEN//BUILD 2026 Hackathon — Won with Ṣòwò as frontend lead *2026*
2nd Place — Devcenter Hacktober 2026 — Won with Sova, competing as one of 30 selected developers *2026*
Best Graduating Student — Nupat Technologies Fullstack Software Training Programme *2024*
Builder, GDG OAU Build with AI — Google Developer Groups, Obafemi Awolowo University *2026*

Education

B.Sc. Computer Engineering • Obafemi Awolowo University (OAU), Ile-Ife *Expected 2030*
Fullstack Software Engineering Programme — Nupat Technologies • Graduated as Best Graduating Student *2024*
